1. The map of the city of Burgas contained on page 8 of this report was traced from a photostatic copy of a map. The scale of the map was stated to be 1/15,000 meters, "1" referring to centimeters. There is good reason to believe that the photostat (or photograph) received is not of the same dimensions as the original map. The scale may, therefore, be inapplicable to this copy of the map. Probably, however, one inch equals approximately 300 meters. 25X1
